**Capital adequacy and liquidity disclosure requirements  
Disclosure as of 31 December 2022**

Purely for ease of reading, the masculine form used in this document is intended to refer to both genders.  
This consolidated regulatory disclosure report is published in English only.  
Due to rounding, the numbers presented in this report may not add up precisely to the totals provided and percentages may not precisely reflect the absolute figures.

# Habib Bank AG Zurich

## Capital adequacy and liquidity disclosure requirements (consolidated)

Habib Bank AG Zurich is providing this information as of 31 December 2022 in accordance with the provisions of the Capital Adequacy Ordinance (CAO) and the dis-

closure requirements set out in FINMA Circular 2016/1 "Disclosure - banks".

### 1. Scope of consolidation

#### Scope of consolidation for capital adequacy purposes

The scope of consolidation for capital adequacy purposes consist of the following companies (hereafter referred to as "the Group"):

• Habib Bank AG Zurich	(hereafter referred to as "the Bank")
• Habib Canadian Bank, Canada	(100% ownership)
• HBZ Bank Ltd., South Africa	(100% ownership)
• Habib Metropolitan Bank Ltd., Pakistan	(51% ownership)
• Habib Bank Zurich (Hong Kong) Ltd., Hong Kong	(51% ownership)
• Habib Bank Zurich Plc, United Kingdom	(100% ownership)
• Habib Metropolitan Financial Services Ltd., Pakistan	(51% ownership)
• Habib Metropolitan Modaraba Management Company (Private) Ltd., Pakistan	(51% ownership)
• First Habib Modaraba, Pakistan	(8% ownership)

#### Scope and method of consolidation according to FINMA Circular 2020/1 "Accounting - Banks"

The Group's method of capital consolidation follows the purchase method. The scope of consolidation according to FINMA Circular 2020/1 "Accounting - banks" additionally includes the subsidiary HBZ Services FZ-LLC, United Arab Emirates (100% ownership), Habib Europe Limited, Isle of Man (100%), HBZ Services (Private) Ltd., Pakistan (100%), HBZ Services (Asia) Limited, Hong Kong (100%) and HBZ Services AG, Switzerland (100%). HBZ Services FZ-LLC, HBZ Services AG, HBZ Services (Private) Ltd. and HBZ Services (Asia) Limited, Hong Kong act as service providers for the Group and do not operate in the financial sector (please refer to the Annual Report 2022, page 43). Habib Europe Limited (former Habib European Bank Ltd.) is in liquidation.

### 2. Group risk principles

#### Risk & Control Framework

The Group's Risk & Control Framework is the cornerstone of its risk management and controlling. It provides

the basis for identifying, assessing and effectively managing risks within the Group. Furthermore, the Risk & Control Framework assigns the overall responsibility for a particular risk class, defines who manages risk and who performs independent risk control.

#### Risk organisation

The Board of Directors' responsibilities are:

- The Board of Directors is responsible for the strategic direction, supervision and controlling of the Group, and for defining its overall risk tolerance by means of a risk appetite statement and overall risk limits;
- The Risk & Control Committee supports the Board of Directors in fulfilling its oversight responsibilities by providing guidance regarding risk governance and the Group's risk profile, including the regular review of major risk exposures and overall risk limits;
- The Audit Committee supports the Board of Directors in fulfilling its oversight responsibilities by monitoring General Management's approach with respect to financial reporting, and the design and effectiveness of internal controls regarding financial accounting and reporting. Additionally, the Audit

## Habib Bank AG Zurich

Committee is responsible for ensuring independence and monitoring the performance of Group Internal Audit and the external auditors.

On an operational level, the Group operates with a three lines of defence model, whereby business and revenue generation, risk management oversight and risk control are performed by functions independent of one another.

Furthermore, a clear distinction is made between "risk owners", "risk managers" and "risk controllers":

- risk owners keep oversight and bear the overall responsibility for the management of specific risk classes or risk types;
- risk managers focus on the monitoring and proactive management of risk. They initiate risk management measures and can change the risk profile;
- risk controllers independently monitor and assess risk as well as highlight deviations from target risk parameters and non-compliance with policies.

### Risk management principles

The following general principles are applied to maintain an appropriate balance between risk and return:

- safeguard the financial strength of the Group by monitoring the risk exposures and avoiding potential risk concentrations at individual exposure levels, at specific portfolio levels and at an aggregate Group-wide level across all risk types;
- protect the Group's reputation through a sound risk culture characterised by a holistic and integrated view of risk, performance and reward, and through full compliance with the Group's standards and principles;
- systematically identify, classify and measure risks applying best practice. A Group risk assessment is thereby performed, which encompasses all risk classes and subsequently allows Management to focus on significant risk exposures;
- ensure Management accountability, whereby Business Line Management owns all risks assumed and is responsible for the active management of all risk exposures to ensure that risk and return are balanced;
- set up independent risk control functions or units, which monitor the effectiveness of risk management and oversee risk-taking activities;
- disclose risks to the Board of Directors, regulators and other stakeholders in a comprehensive and transparent manner.

### Internal controls

Internal controls are processes and instruments used to monitor and control operational and other business risks. In order to continuously enhance the Group's internal control system and the effectiveness of controls, the results of current control processes are reviewed and the outcome of the Group's operational risk management processes is taken into account. The organisational units responsible for internal controls work closely with other organisational units within the Group.

### Credit risk

Credit risk arises from the possibility that a counterparty (i.e. private and corporate clients, financial institutions as well as issuers or sovereigns) will not fulfil contractual obligations or the credit quality will deteriorate. In order to manage potential default risk and other prevailing credit risks as effectively as possible, it is divided into the following risk types: client credit risk, issuer credit risk, counterparty credit risk, country risk (including cross-border / transfer risk), settlement risk and credit concentration risk.

The Group Credit Management Committee is responsible for credit risks and credit decisions, which may be delegated to the respective Country Credit Management Committees. The Group manages its credit risk within a conservative framework by evaluating the creditworthiness of the borrowing counterparties, setting appropriate credit limits and obtaining collateral as deemed necessary. For each collateral type a minimum haircut is defined in order to account for the volatility in market values according to the nature and liquidity of the collateral. Around 38% of the Group's credit exposure is secured by property and only 11% is unsecured.

The Group's credit risk appetite is defined and monitored through a comprehensive system of credit limits.

The Group has its own rating system for corporate clients. Each credit is assessed as to the borrower's creditworthiness, collateral coverage and collateral quality, as well as the underlying transaction rationale, business potential and any additional risk mitigations. Personal credits are usually only granted on a fully collateralised basis. Collateral coverage is monitored on a regular basis and according to the prevailing market conditions.

An adequate and clear segregation of duties is established among the various organisational units involved

## Habib Bank AG Zurich

in the acquisition of credit business, the analysis and approval of a credit request, and the subsequent administration.

Bank counterparties, issuers and sovereigns are analysed according to their financial performance and their external rating. Roughly 75% of the credit exposure to financial institutions is of investment grade quality and the remaining 25% consists mainly of short-term trade finance exposure in emerging markets to which the Group has close links, and the portfolio is monitored with a set of country limits. Our risk exposure to Russia is insignificant.

Regarding non-performing loans, the Group is in a comfortable position. After taking into account collateral at market value and the specific value adjustments for default risks, the net unsecured and unprovided position as at the end of December 2022 was nil.

The Group has adopted an ECL concept in accordance with IFRS 9 guidelines in six out of eight country operations. HMB will adopt it fully during 2023 while already complying with the required value adjustments as of end of 2022. Therefore, the concept of providing for latent credit risks is well established and will be further perfected during 2023. During 2022, CHF 6.3 million of latent credit risk provisions were released, reaching a total of CHF 75.1 million of ECL coverage, while the Group also holds some CHF 119.6 million of specific provisions for actual non-performing loans. The Group has also undertaken an extensive external validation of all the existing models and is in the final stages of implementing all revised models. Full implementation of these revised models will be accomplished during the first half of 2023.

Cross-country risks are monitored quarterly and are either protected by guarantees obtained from the World Bank (MIGA) or are covered by the forward-looking element in the ECL models. Switzerland keeps separate country provisions if required.

### Liquidity risk

The Group applies a prudent approach to liquidity risk management. The Group Asset & Liability Management Committee regularly monitors liquidity and market risks.

The Group grants advances and loans to clients both on a short-term basis and with tenors gener-

ally of up to five years. Funding is primarily obtained through deposits, which are mainly at sight or short-term deposits. Wholesale funding is not significant and deposits are well diversified. No single depositor accounts for more than 5% of the Group's total deposits. Excess liquidity is held as bank placements or financial investments. The latter primarily consist of bond portfolios of sovereign issuers or other issuers that are high quality.

The contractual maturities of the Group's financial assets exceed the contractual maturities of the financial liabilities. However, when determining maturity gaps, the stickiness of deposits or economic maturities are considered, which significantly reduces the contractual gaps. Furthermore, individual client groups in different countries will not act in the same way and at the same time.

In general, the Group is exposed to potentially larger deposit outflows and sudden adverse market developments. Therefore, related scenarios have been analysed as part of three liquidity stress tests performed throughout the Group. The stress test results showed that the liquid assets available could absorb projected outflows in all cases.

The Group has a strong liquidity position, which is further supported by established repo functionalities. In addition, liquidity coverage ratio and net stable funding ratio targets have been defined for all operating Group companies. Both funding and liquidity management is performed on a decentralised basis. The short-term liquidity disposition and liquidity situation of individual countries are monitored by the respective country treasury functions. In addition, liquidity reserves are held both at the Group and at the country level, and contingency funding plans are in place for the Group as well as all branches and subsidiaries.

### Market risk

The Group is exposed to interest rate risk, foreign exchange risk, equity risk and, to a very limited extent, commodity risk.

The Group's market risk appetite is defined and monitored through a comprehensive system of market risk limits by the Group Asset & Liability Management Committee. Furthermore, the Group regularly performs scenarios and stress tests for interest rate, foreign exchange and equity risks based on prevailing risk exposures.

## Habib Bank AG Zurich

The Group is exposed to interest rate risk due to interest periods set for advances made to clients exceeding the interest periods for client deposits taken. To limit interest rate repricing risk, most client advances are agreed on a three or six-month base rate plus a credit spread.

In addition, branches and subsidiaries have placed excess liquidity in bank placements or in financial investments with tenors usually of up to three to five years. However, the interest-rate risk related to long-term fixed income instruments included in the financial investment portfolio largely offset by the stable portion of the customer deposits. Behavioural deposit analyses are performed for all branches and subsidiaries. These highlight that a significant portion of deposits will remain with the Group, even if interest rates move.

The Group pursues limited trading activities only. They relate to short-term purchases and sales of local government securities in the local currency of a Group entity for profit generation.

The Group employs a sophisticated Interest Rate Risk in the Banking Book (IRRBB) approach and considers both the value and the earnings perspective. For both IRRBB and the combined trading book and banking book, Economic Value of Equity (EVE) sensitivity limits have been defined by the Board of Directors. EVE sensitivity limits are in place for all countries and limit adherence is monitored by the Group Asset & Liability Management Committee.

For foreign exchange transaction risks, the Group pursues a risk-averse approach and aims to keep the potential foreign exchange losses to a minimum. The Group does not pursue proprietary foreign exchange trading activities.

Profits earned in the Bank's branches are subject to exchange rate risk up to their remittance to Habib Bank AG Zurich, Zurich. These risks are monitored at Head Office, and projected profits are hedged as deemed appropriate. Capital and reserves held at the branches are also subject to foreign exchange risk when they are held in local currencies. Any foreign exchange translation gain or loss on these capital and reserves is taken to the income statement in the year in which it occurs.

The Group analyses and projects the foreign exchange translation exposure which arises from its investments in foreign subsidiaries. The exchange rate movements on the net asset exposure of the subsidiaries give rise to revaluation gains and losses, which are included in con-

solidated equity. In general, the Group does not hedge net asset translation exposures with derivative financial instruments.

The Group maintains an equity investment program with the aim to acquire and maintain highly liquid equities with stable business models in industry-leading positions and regular dividend flows. The Board of Directors approves the Group's risk limits for equities and adherence is monitored by the Group Asset & Liability Committee.

### Operational risk

Operational risk is defined as the risk of loss resulting from inadequate or failed internal processes, people, systems or from external events.

The Group makes use of six operational risk management processes. These consist of key risk indicators, change risk assessment, risk self-assessment, scenario analysis, risk event management and issue management and action tracking. Group Operational Risk establishes and manages these operational risk processes.

Operational risks can arise from all business lines and from all activities carried out by the Group. In addition to the operational risk management processes, risk mitigation measures are used and comprise of control enhancement, model risk management, business continuity management and other mitigation measures (risk avoidance, risk reduction and risk transfer) across the Group.

The Group has developed a risk-based cyber risk strategy. The Head Group Information & Technology Risk and his dedicated team of cyber specialists monitor cyber risk, perform risk assessments, vulnerability and penetration tests as well as run information security campaigns to raise employee awareness across the Group.

### LIQA: Liquidity: management of liquidity risks

Please find detailed information regarding the management of liquidity in the section "Liquidity risk" on page 3 of this document. As indicated the Group maintains a strong liquidity position, which results in a average liquidity coverage ratio over the year 2022 between 130.1% and 151.6%. The devaluation of the foreign currencies, specially the Pakistan Rupee, affected the total "High quality liquid assets" (HQLA) as well as the "Total net outflow of funds" over the course of the year 2022.

The Group's total HQLA of CHF 3.5 billion in Quarter 4 2022 includes mainly balances with central banks in countries where the Group is active, investments in local government bonds in Pakistan and bond investments in Switzerland. Moreover, HQLA government bonds in Pakistan are only to be considered up to the net cash outflow of the entity, which is in line with the FINMA Circular 2015/2 "Liquidity risks - banks", margin no. 161.

### Non-performing loans / receivables

Non-performance of a credit exposure is considered with regard to a particular obligor when either or both of the two following events have taken place:

- The Group considers that the obligor is unlikely to pay its credit obligations to the Group in full, without recourse by the Group to actions such as realizing collateral (if held).
- The obligor is 90 days or more past due on any material credit obligation to the Group. Overdrafts will be considered as being past due once the client has breached an advised limit or been advised of a limit smaller than current outstandings.

The assessment as to whether a credit exposure is non-performing is made on an entity level entailing all exposures of the respective entity.

<b>Total past due exposures</b>	<b>156'218</b>	<b>115'018</b>

### Restructured credits

A restructuring of a credit agreement is generally defined to be a breach of contract under the initially agreed terms and conditions. Regardless of the interest and amortization payments, it is only possible in exceptional cases to keep restructured advances in the normal credit category and not to flag it as heightened or impaired credit risk.

A restructuring flag is set in the system showing the inability of the borrower to continue servicing its debt without relief in terms and conditions.

## IRRBBA : Objects and policies of the interest rate risk in the banking book

- a) **Description of how the bank defines IRRBB for the purpose of managing and measuring risk**  
For Interest Rate Risk in the Banking Book (IRRBB) the Group considers all interest rate sensitive positions in the banking book. For interest rate risk management and control purposes, both value and earnings impact is determined. Thereby the focus is on two measures: Economic Value of Equity (EVE) as well as Net Interest Income (NII) sensitivity.
- b) **Description of the overall strategy of the bank to manage and mitigate IRRBB**  
For IRRBB management and risk mitigation purposes, EVE and NII sensitivities are reported to the Group Asset & Liability Committee (GALC) and the respective Country Asset & Liability Committee (CALC). In addition, several IRRBB stress tests are performed (see paragraph d below). Furthermore, a front-independent unit checks that the worst case regulatory IRRBB stress test result is within the defined risk limits. Models used for IRRBB computation purposes form part of the Group's model inventory, require a model description and undergo a periodic model validation process. Model validation results are reported to the Group Risk & Control Committee (GRCC).
- c) **Frequency of calculation of the bank's IRRBB metrics and description of the specific metrics the bank uses to estimate its sensitivity to IRRBB**  
The Group focuses on two measures: EVE sensitivity (EVE change / EVE) as well as the NII sensitivity (NII change / NII), which are computed on a quarterly basis.
- d) **Description of the interest shock and stress scenarios the bank uses to estimate in economic value and earnings**  
The Group performs several IRRBB stress tests (parallel up / down, flattener / steepener, short term up / down) based on regulatory required as well as internally defined stress factors.
- e) **Differences between the model assumptions used in the bank's internal interest risk measurement system and the model assumptions prescribed to disclosure in Table IRRBB1**  
For internal IRRBB computations, other stress factors are applied for individual Emerging Markets currencies to better reflect recent developments and economic realities. For example, no 300 basis points stress is applied for the AED as the currency is pegged to the USD (for which a 200 basis points stress is prescribed by FINMA)
- f) **Overall description of how the bank hedges its IRRBB and the associates accounting treatment**  
At present, the Group does not employ interest rate derivatives to hedge its IRRBB exposure. When deemed necessary, EVE sensitivity is reduced by changing the duration of the Group's fixed income portfolio through purchase and sale of securities as well as changing the composition of repurchase / reverse repurchase positions.

g) Key modelling assumptions and calculation parameters used to calculate $\Delta$ EVE and $\Delta$ NII in Table IRRBB1 with reference to the items and currencies shown in Table IRRBBA1			
1)	Change in net present value of capital ( $\Delta$ EVE)	Calculation of cash flows: Recognition of interest rate margins and other components	Interest cash flows used for EVE change computation include client credit spreads
2)		Mapping: Description of the cash flow mapping used	Interest cash flows and repricing positions are included in the respective time bucket in accordance with the date of the interest payment or the date of repricing, respectively. However, for EVE change computations, actual payment or repricing dates are applied.
3)		Discount rates: Description of the (product specific) discount rates or interpolation assumptions	For discounting purposes, the risk-free yield curve in the respective currency plus a credit spread by asset class is used. This ensures an economically consistent computation in line with the chosen approach under 1) above.
4)	Changes to planned income ( $\Delta$ NII)	Description of the procedure and central assumptions in the model for calculating future income	NII change is computed based on NII resulting from prevailing contractually agreed positions (run-off balance sheet) and future transactions, which fall into the defined 12-month horizon. Given the constant volume, lifetime and margin assumption, actual transactions reaching maturity are rolled over or "re-newed" and modelled as future transactions.  For the NII change computation, new interest rates for floating rate positions, fixed rate instruments and Non Maturing Balances (NMB) are determined based on the prevailing risk free yield for the currency, the respective forward adjustment and the defined interest rate stress factors for the currency (parallel shift up and down).
5)	Variable exposures	Description of the procedure and central assumptions and parameters for determining the interest rate reset date and cash flows of variable exposures	For Non Maturing Balances (NMB), the interest repricing dates are determined based on internal models.
6)	Exposures with repayment options	Description of the assumptions and procedures for recognising behaviour-related early repayment options	The Group has no material asset positions with early repayment features. Most loans are granted as floating or managed rate loans. Therefore, no related optionalities are considered.
7)	Term deposits	Description of the assumptions and procedures for recognising behaviour-related early withdrawals	Early withdrawals of deposits are not very frequent. In addition, a penalty payment applies in most cases when an early deposit repayment is made. This largely compensates for potential unrealized gains foregone. Therefore, early withdrawal options are not considered for the Group's IRRBB computation.
8)	Automatic interest rate options	Description of the assumptions and procedures for recognising automatic, behaviour-independent interest rate options	Except for very few bonds held with a prepayment option by the issuer, there are no automatic interest rate options. The prepayment options are not modelled for IRRBB purposes in view of immateriality.
9)	Derivative exposures	Description of purpose, assumptions and procedure for linear and non-linear interest rate derivatives	The Group does not make use of interest rate derivatives at the present time.
10)	Other assumptions	Description of other assumptions and procedures affecting the calculation of figures in Tables IRRBBA1 and IRRBB1, e.g. aggregation across currencies and correlation assumptions for interest rates	The EVE change results by currency are simply added up based on regulatory requirements (FINMA Circular 2019/2 "Interest rate risk - Banks"). This aggregation does not consider correlations.

## IRRBA1: Interest rate risk: Quantitative information on the structure of positions and repricing of interest rates

31.12.22	Amounts in CHF '000			Average time to resetting of interest rates (in years)	
	Total	- of which in CHF	- of which in other significant currencies*	Total	- of which in CHF
<b>Defined resetting date of interest rates</b>					
Due from banks	1'753'175	2'416	1'529'987	0.14	0.26
Due from customers	1'488'427	715	1'447'919	1.03	1.27
Fixed-term mortgages	298'125		165'117	2.43	
Financial investments	5'578'862	338'923	4'833'435	1.29	2.54
Other assets	27'804		27'628	0.02	
Receivables on derivatives	1'201'273	3	1'141'313	0.12	0.01
Due to banks	-1'610'926	-90'023	-1'506'181	0.21	0.01
Due to customers	-2'831'833	-17	-2'478'491	0.53	0.69
Liabilities on derivatives	-1'200'126	-97'555	-1'005'335	0.12	0.06
<b>Non-defined resetting date of interest rates</b>					
Due from banks	277'723	95	168'945	0.00	0.00
Due from customers	2'047'856	9'660	1'849'114	0.18	0.30
Liabilities in personal and current accounts at sight	-4'712'714	-38'448	-4'277'131	1.54	1.01
Other liabilities at sight	-160'998	-2'835	-148'203	0.00	0.00
Liabilities from client deposits, callable but not transferable (savings)	-1'695'817	-31'956	-1'507'224	0.47	0.12
<b>Total</b>	<b>460'831</b>	<b>90'978</b>	<b>240'893</b>	<b>0.31</b>	<b>8.96</b>
Maximum repricing period of interest rates for positions with model-based interest rates				5 years	

\* Representing more than 10% of total balance sheet.

**Comment:**

The net position above does not include sight deposits with the Swiss National Bank, clearing houses regulated by FINMA and foreign central banks.

## IRRBB1: Interest rate risk: Quantitative information on the economic value of equity and net interest income

in CHF 1'000	ΔEVE (change in the economic value of equity)		ΔNII (change in net interest income)	
	31.12.22	31.12.21	31.12.22	31.12.21
Paralel up	26'902	21'306	78'319	97'709
Paralel down	-20'040	10'993	-68'907	-84'097
Steeper (1)	7'838	14'531		
Flattener (2)	-432	-368		
Short rate up	7'794	1'872		
Short rate down	-6'205	10'325		
Worst scenario	-20'040	-368	-68'907	-84'097
Tier 1 capital	1'136'782	1'159'331		

(1) The steeper scenario considers a reduction of short term rates combined with an increase of long term rates.

(2) The flattener scenario considers an increase of short term rates combined with a reduction of long term rates.

Comment:

EVE changes for emerging market currencies continue to exceed the EVE changes for western currencies.

## ORA: Operational risks: general duties

Please find detailed information regarding the management of operational risks in the section "operational risk" on page 4 in this document.

Habib Bank AG Zurich applies the basic indicator approach for operational risks.
